

Computer Maintenance

By: Sahbaj Singh

What the career is about? What do you do?

To start of with, their are different types of maintenance when it comes to computer science. Some of them are hardware **maintenance where they** test, clean, and repair equipment, and software **maintenance which** is fixing up the software, updating application and programs and repairing software issues.

What are the work condition

Computer maintenance is the practice of keeping **computers** in a good state of repair. A computer containing accumulated dust can result in many problems and may not run properly.

Computer repair technicians must be able to see inside computers to replace and repair small components ,which means that that environment they work at must contain a lot of light, and must be quite

Who are your customers

The customers of this workline are people that want to get their computers repaired, or have some sort of problem with their software so they take it into a computer maintenance shop.
